## PROFESSIONAL SUMMARY

Detail-oriented and delivery-focused Software Engineering graduate with hands-on experience founding software ventures and managing full-stack digital products. Proven track record of applying an "edge-case mindset" to anticipate architectural bottlenecks, manage project scopes, and mitigate deployment risks. Skilled in translating complex business requirements into structured sprint backlogs, leading cross-functional developer collaborations, and utilizing Agile/Scrum methodologies to deliver scalable software solutions on time.

## CORE COMPETENCIES & PM SKILLS

- **Project Management:** Agile/Scrum Methodologies, SDLC Management, Requirement Gathering, Scope & Risk Management, Sprint Planning.
- **Product & Architecture:** System Design, Product Lifecycle Management, API Integration Strategy, DevOps Pipelines.
- **Tools & Platforms:** Jira, Trello, Git/GitHub, Docker, Kubernetes, Postman, Linux/Ubuntu.
- **Tech Stack Awareness:** MERN/MEAN Stacks, Python frameworks (FastAPI/Flask), WebSockets, Solidity, SQL/NoSQL.
- **Interpersonal Skills:** Cross-functional Team Collaboration, Technical Communication, Problem-Solving, Stakeholder Alignment.

## WORK EXPERIENCE

### Full-Stack Developer Contract — Orixity (Remote)

Sep 2025 – Jan 2026

- Managed client communication, gathered technical requirements, and translated business objectives into structural developer tasks for multi-stack applications (MERN/MEAN).
- Spearheaded system design alignment, coordinating the development of secure RESTful APIs (JWT) and data schemas to prevent latency issues and delivery friction.
- Facilitated cross-functional project tracking and risk mitigation workflows, ensuring sprint milestones were consistently hit ahead of final software deployments.

### Web Developer Intern — DataX (Remote)

June 2024 – Aug 2024

- Coordinated frontend feature iterations within an Agile team structure, ensuring alignment between interactive UI design specs and core application performance.
- Participated in daily scrum stand-ups and retrospective syncs, actively identifying system bottlenecks and streamlining delivery timelines.

## PROJECTS

### Final Project: DataChain (Verifiable Dataset Marketplace)

Final Completion: May 2026

Role: Technical Project Lead & Product Manager

[Solidity, Hardhat, IPFS, React.js, Node.js, Python, ZoKrates]

- Managed the complete end-to-end product delivery lifecycle (SDLC) of a Web3 marketplace, directing a cross-functional engineering team to ensure alignment between blockchain smart contracts and AI modules.
- Defined project scope, managed risk boundaries, and designed systemic validation workflows utilizing AI agents and Zero-Knowledge Proofs (ZKP) to resolve trust and automated payment logic.
- Oversaw architectural scalability and deployment reliability by establishing containerized testing environments via Docker and IPFS integrations.

### Selected Semester Projects

FAST-NUCES

- **Ecommerce Storefront [Next.js, Supabase]:** Managed product requirements and database schema design for a modern web application, tracking feature development across dynamic routing and secure backend API routes.
- **Real-Time Chat Application [MEAN, WebSockets]:** Acted as scrum master for a high-concurrency communications app, prioritizing features for real-time event handling, payload delivery, and group data isolation protocols.
- **ArtistryPanel [React, Node.js]:** Led UI/UX functional requirement mapping, translating creative user journeys into structured development backlogs with clean data management cycles.

## EDUCATION

FAST - National University of Computer and Emerging Sciences, Islamabad.

Graduation: June 2026

Bachelor of Science (Software Engineering)

Major: Software Project Management, System Design, DevOps

Emalah Foundation College, Rawalpindi Punjab

2022

F.Sc (Physics, Chemistry, Mathematics)

## ACHIEVEMENTS, TRAININGS & ACTIVITIES

---

- Successfully managed the functional delivery and milestone execution of multiple concurrent full-stack software products featuring real-time architecture.
- Completed training and advanced coursework focusing on Agile engineering models, release management, and containerized deployment orchestrations (Docker/Minikube).
- Active portfolio manager on GitHub, standardizing documentation, structural tracking, and repository architecture for public engineering projects.
