Education

FAST-NUCES

Bachelor of Software Engineering

Emallah Foundation College

Pre engineering

Emallah Foundation School

Computer Science

About Me

Motivated and detail-oriented **Software Engineering student** with strong skills in **web development, front-end design, and modern frameworks**. Passionate about creating user-friendly, responsive, and efficient web applications. Experienced in building projects using **C++, Java, JavaScript, HTML, CSS, Docker, and Kubernetes**. A quick learner, adaptable team player, and problem-solver seeking opportunities to grow as a **Web Developer**.

Technical Skills and Projects

Programming: C++, java, html

Other Skills:

- Human Computer Interaction
- Web development
- Css
- Html
- Javascript
- Front end development
- Oop
- Datastructure
- Programming fundamental
- Requirement gathering
- Architecture diagram
- Git hub
- Api integeration
- Docker
- Kubernetes

Enchanted Labyrinth Explorer | C++

Developed by leveraging advanced data structures, enhancing game complexity and user engagement.

Dodge'em | C++

Developed the project using OOP concepts, ensuring efficient code organization and promoting code reusability through encapsulation and inheritance.

DataX Website

A full responsive front-end website for DataX was designed using HTML, CSS, and JavaScript. It had an intuitive user interface with easy navigation and a seamless user experience catering to business needs for the company.

Personal Portfolio Website

A personal portfolio website featuring projects, skills, and experience in being a student of software engineering and a web developer. A modern feel is maintained with the web site, having engaging elements to interact with visitors.

DataX Homepage Redesign

Redesigning the home page of DataX to enhance its visual appeal and user interaction, this redesigning targeted a new and more modern layout while ensuring better load timings and cross-browser compatibility.

iCloud Copy Website

I replicated the Apple iCloud website as part of the internship at DataX. The project is an interface replicating the iCloud UX, having login functionality with an indication of user status.

Artistry Panel

Developed a **digital art panel platform** allowing users to upload, showcase, and manage creative artworks with an engaging front-end.

Movie Recommendation Website

Built a **movie recommendation web app** integrating **API data fetching** to display trending and recommended movies dynamically.

Experience

■ 3 month internship at Data X
